

As an established and accomplished abatement, remediation and restoration services company, **BNL Technical Services, LLC** provides its clients with the support necessary to ensure efficient project execution.

Nuclear

Whether the exposure hazards stem from legacy waste, commercial operations, research activities or military operations, BNL Tech has the experience to assess, mitigate and monitor radiation exposure from contaminated land areas, buildings, equipment or other contaminated media, such as surface/groundwater and laboratory activities.

Asbestos

The presence of asbestos is an ever-present concern for any party responsible for undertaking maintenance, repair, servicing, disposal or demolition of older buildings and equipment. Therefore it is essential to have a reliable partner to properly identify and handle this "miracle fiber".

Lead

During Renovation, Repair and Repainting (RRP) activities of facilities built prior to 1978, the presence of lead is always a concern. BNL Tech can assist you in ensuring that the required measures are taken to ensure regulatory compliance and worker/occupant safety.

Mold

The occupational and environmental health/safety hazards associated with mold have become key concerns for both facility occupants and owners as the broad-ranging medical effects better understood. Mold is no longer just an air-quality issue, but a potential long-term quality of life issue.
